

# WHY implement 3Shape Audio design software in your production

3Shape Audio offers customized design software fit for your needs and customer outcomes

With 3Shape Audio design software you can achieve the perfect fit while reducing unit cost and increasing process efficiency in your operations through easy scaling and automation of your production.

Implementing 3Shape design software into your production opens to following benefits:

**Consistently achieve the perfect fit**

Produce consistent, identical designs and sizes with speed and accuracy, through side-by-side modeling. Semi-automated workflows and restrictions to product templates bring down potential errors and further reduce modeling time.

**Tailored workflows to your target outcomes**

Build your order forms directly in the 3Shape Audio design software to achieve your target outcomes. Choose between our predefined templates or create your own, as there are no limits on which components you use, or how you combine them.

**Scale your production to match your demands**

Your subscription plan is based on your expected annual number of production units. You choose a capacity tier based on your number of expected saves. These tiers are divided into 500, 1200, 2400, 6000, 12000 and unlimited saves. You can at a later stage adjust your save capacity based on your production requirement.

3Shape design software is offered through two tailored-for-purpose applications to support you in achieving the perfect fit:

**3Shape EarMouldDesigner**

Modeling of earmolds for BTE, eartips for RIC/RITE, earpieces and plugs

**3Shape ShellDesigner**

Modeling of ITE/ITC/CIC/IIC shells, in-ear monitors and embedded RIC/RITE custom eartips

# Design the **widest range of custom earpieces and devices** tailored to your target outcomes

## Design your own workflow

Tailor your workflows to your unique requirements. Combine components from the below standard selection – or achieve creative perfection by customizing even further and add as many components as you need.

Product types

Fit styles

Shapes

Material

Components

Venting

Canal shaping

Product types	Fit styles	Shapes	Material	Components	Venting	Canal shaping
IIC	Solid	Skeleton	Acrylic	Filters	Attached	Taper
CIC	Hollow / foil	Semi	Metal	Receivers	Walled	Cut
ITC	Custom openings	Full Shell	Soft silicone	Electronics	IROS	Extend
HS	Shell	Half Shell		Wax-guards	Custom	Scale
RIC / RITE		Canal		Microphones	Point	
MiniRite		Canal lock		Earphones	Step	
Open		CROS		Hooks		
BTE		Plugs		ID's		
In-ear monitors		Carved Sleeve		Artwork		

## Deliver custom products for all use-cases with 3Shape Audio design software
